100% Thermally Balanced Professional Quality Soldering Iron

INSTRUCTIONS FOR USE

This high-quality soldering iron is suitable for both professional and D.I.Y. applications. With proper care and use, your new soldering iron's life can be significantly increased.

1. Always ensure that the iron's voltage rating and your power supply match prior to use.
2. Always ensure that the iron's replaceable tip is securely fastened prior to plugging the power cord into the power outlet.
3. CAUTION: Soldering iron should be stored out of the reach of children. Children should only use iron under adult supervision.
4. CAUTION: The tip and barrel are hot, never touch the tip or barrel when in use or while cooling down.

CARE OF TIPS

This unit comes with a chrome plated, iron clad and pre-tinned tip that is engineered to outperform and out live conventionally plated tips. Used according to these instructions, the service life of your tip can be greatly extended.

1. Tip should be wiped clean "whilst hot" with a damp sponge.
2. Do Not use anti-freeze solution to clean tip.
3. Do Not use abrasive materials (files, etc.) to clean tip.
4. Always "tin" tip before each use with a new layer of solder.
5. Make sure the appropriate solder is used for each specific job.
6. Thoroughly clean all surfaces to be soldered before soldering.

IMPORTANT: When installing a new tip, check barrel for any loose material and remove it.
